Eflornithine 13,9% cream

What is this medicine?

Eflornithine interferes with a chemical in the hair follicles of the skin. This results in slower hair growth where the cream is applied. Eflornithine is used to reduce unwanted facial hair in women. It does not permanently remove hair or "cure" unwanted facial hair. However it will help you manage your condition and improve your appearance. Eflornithine may also be used for purposes other than those listed in this medication guide.

What should my health care professional know before I take this medicine?

Do not use Eflornithine if you have had an allergic reaction to it in the past. Eflornithine is in the FDA pregnancy category C. This means that it is not known whether eflornithine will harm an unborn baby. Do not use this medication without first talking to your doctor if you are pregnant. It is also not known whether eflornithine passes into breast milk. Do not use this medicine without first talking to your doctor if you are breast-feeding a baby. This medicine has not been approved for use by children younger than 12 years of age. Eflornithine is for external use only. Continue to use Eflornithine even if you do not see immediate results. Reduction in facial hair occurs gradually. Improvement may be seen as early as 4 to 8 weeks of treatment, however it may take longer in some individuals. If no improvement is seen after 6 months of use, treatment should be discontinued. Hair growth may return to pretreatment levels approximately 8 weeks after discontinuation of treatment.

How should I take this medicine?

Eflornithine is for external use only. Apply Eflornithine exactly as directed by your doctor. If you do not understand these directions, ask your pharmacist, nurse, or doctor to explain them to you. Eflornithine does not permanently remove hair or "cure" unwanted facial hair. It is not a hair remover (depilatory). You will need to continue using your current hair removal techniques. Eflornithine will help you manage your condition and improve your appearance. his medicine is for external use only. The cream is usually applied twice daily, at least eight hours apart, or as
