Calcitonin nasal

What is Calcitonin?

Calcitonin is a man-made form of a hormone that occurs naturally in the thyroid gland.

Calcitonin Nasal Spray is used to treat osteoporosis in women who have been in menopause for at least 5 years. It should be used along with adequate calcium and vitamin D intake.

Calcitonin may also be used for purposes not listed in this medication guide.

Warnings

To make sure you are not allergic to Calcitonin, your doctor may perform an allergy skin test before your first dose of Calcitonin Nasal Spray. Before using Calcitonin, tell your doctor if you have any nasal or sinus problems such as nasal deformities, a chronic infection, or nasal pain. Avoid using any other nasal sprays or medicines at the same time you use Calcitonin unless your doctor has told you to.

Call your doctor at once if you have any type of severe irritation of your nose, or if you feel light-headed or faint.

Less serious nasal irritation is more likely to occur, such as minor bleeding, redness, itching, tenderness, dryness, crusting, scabs, or nasal congestion.

To be sure Calcitonin is not causing harmful side effects to the inside of your nose, your doctor may want to check your nasal passages often. Visit your doctor regularly.

Before taking this medicine

You should not use this medicine if you are allergic to salmon calcitonin. To make sure Calcitonin is safe for you, tell your doctor if you have:

- high levels of calcium in your blood (hypercalcemia); or
- any nasal or sinus problems such as nasal deformities, a chronic infection, or nasal pain.

Using Calcitonin may increase your risk of developing certain types of
