Dycerin Capsule

What is this product?

Dycerin Capsule is used in the treatment of osteoarthritis. It lowers pain and inflammation and helps the stiff joints to heal quickly. It may be used alone or in combination with other medicines.

Dycerin Capsule is to be taken with food. Take it regularly and at a fixed time each day. It may take few weeks for the medicine to work. Along with taking the medicine, exercise regularly to strengthen muscles around the affected joint and manage your weight. Do not stop taking the medicine suddenly without talking to your doctor.

It may cause few common side effects such as diarrhea or discoloration of urine. Regular monitoring of blood sugar level, especially in diabetic patient, is important as it may increase your blood sugar level.

USES OF DYCERIN CAPSULE

Osteoarthritis of knee and hip joints

DYCERIN CAPSULE SIDE EFFECTS

Common

- Diarrhea
- Discoloration of urine

HOW TO USE DYCERIN CAPSULE

Take this medicine in the dose and duration as advised by your doctor. Swallow it as a whole. Do not chew, crush or break it. Dycerin Capsule is to be taken with food.

HOW DYCERIN CAPSULE WORKS

Dycerin Capsule is a proteoglycan synthesis stimulator. It works by building cartilage (soft connective tissue around the joints) leading to joint repair. It also lowers pain and inflammation (swelling).
