Reminyl

Generic Reminyl improves the function of nerve cells in the brain. It works by preventing the breakdown of a chemical called acetylcholine (ah see til KO leen). People with dementia usually have lower levels of this chemical, which is important for the processes of memory, thinking, and reasoning. Galantamine is used to treat mild to moderate dementia caused by Alzheimer's disease. Galantamine may also be used for purposes not listed in this medication guide.

Active ingredient: Galantamine

Brand(s):Galamer

Manufacturer: Sun Pharmaceutical Industries Ltd. **Disease(s):**Dementia / Alzheimer's Disease
