Timolol Maleate 0.25% and 0.5% eyedrops

What is this medicine?

TIMOLOL is used in the eye to treat open-angle glaucoma and high pressure in the eye.

What should my health care professional know before I take this medicine?

They need to know if you have any of these conditions:

- diabetes
- heart or blood vessel disease like slow heart rate, worsening heart failure, heart block, sick sinus syndrome or Raynaud's disease
- lung disease like asthma or emphysema
- thyroid disease
- wear contact lenses
- an unusual or allergic reaction to timolol, other beta-blockers, medicines, foods, dyes, or preservatives
- pregnant or trying to get pregnant
- breast-feeding

How should I use this medicine?

This medicine is only for use in the eye. Do not take by mouth. If you are using a unit dose container, use immediately after opening and throw away right after use. Wash hands before and after use. Tilt your head back slightly and pull your lower eyelid down with your index finger to form a pouch. Try not to touch the tip of the dropper to your eye, fingertips, or any other surface. Squeeze the prescribed number of drops into the pouch. Close the eye for a few moments to spread the drops and apply gentle finger pressure to the inner corner of the eye for 1 to 2
