Meclizine tablets

What is this medicine?

Meclizine (meclizine) is an antihistamine that reduces the effects of natural chemical histamine in the body.

Meclizine is used to treat or prevent nausea, vomiting, and dizziness caused by motion sickness. It is also used to treat symptoms of vertigo (dizziness or spinning sensation) caused by disease that affects your inner ear.

Meclizine may also be used for purposes not listed in this medication guide.

What should I tell my health care provider before I take this medicine?

To make sure Meclizine is safe for you, tell your doctor if you have any of these conditions:

- liver disease;
- kidney disease;
- asthma;
- glaucoma;
- enlarged prostate; or
- urination problems.

How should I use this medicine?

You should not take Meclizine if you are allergic to meclizine.

This medication may impair your thinking or reactions. Be careful if you drive or do anything that requires you to be alert.

Drinking alcohol can increase certain side effects of Meclizine
