Doxylamine and pyridoxine tablets

What is this medicine?

DOXYLAMINE is an antihistamine that reduces the effects of natural chemical histamine in the body.

PYRIDOXINE is a form of vitamin B (B6).

Doxylamine and pyridoxine is a combination medicine used to treat nausea and vomiting during pregnancy, sometimes called morning sickness.

What should I tell my health care providers before I take this medicine?

Do not use doxylamine and pyridoxine if you have used an MAO inhibitor in the past 14 days. A dangerous drug interaction could occur. MAO inhibitors include isocarboxazid, linezolid, methylene blue injection, phenelzine, rasagiline, selegiline, tranylcypromine, and others.

You should not use this medicine if you are allergic to doxylamine or pyridoxine, or to other antihistamines such as Benadryl or Dramamine.

To make sure this medicine is safe for you, tell your doctor if you have:

- asthma or other breathing disorder;
- glaucoma, increased pressure inside your eye;
- blockage in your digestive tract (stomach or intestines);
- a stomach ulcer; or
- bladder obstruction or other urination problems.
