

Viibryd

Vilazodone is an antidepressant in a group of drugs called selective serotonin reuptake inhibitors (SSRIs). Vilazodone is used to treat major depressive disorder (MDD). Do not use Vilazodone if you have used an MAO inhibitor in the past 14 days, such as isocarboxazid, linezolid, phenelzine, rasagiline, selegiline, or tranylcypromine, or if you have had a methylene blue injection.

Active ingredient: [Vilazodone](#)

Vilazodone tablet

What is vilazodone?

Vilazodone is an antidepressant that is used to treat major depressive disorder (MDD).

Warnings

Do not use vilazodone if you have used an MAO inhibitor in the past 14 days, such as isocarboxazid, linezolid, methylene blue injection, phenelzine, rasagiline, selegiline, or tranylcypromine.

Some young people have thoughts about suicide when first taking an antidepressant. Stay alert to changes in your mood or symptoms. Report any new or worsening symptoms to your doctor.
