You'll find this resource under "Study Guides" on our links page, which focuses on Amateur Radio study materials. The link has been active since August 31st, 2015, and has been followed 413 times. Interestingly, no one has rated it yet - be the first to do so! Last updated in September 2015. Occasionally, links might expire or become outdated. If you encounter any issues, please report them here for prompt attention. In case this resource doesn't meet your needs, explore other links within the same category; they may offer relevant insights or information. Here's how I got started in the study guide business: In 2005, I was chillin' at our club's Field Day site when Bruce, W8BBS, walked up with his Tech license exam study guide. He had taken each question from the pool and reworded them into statements, then organized them into paragraphs with added text to make it read like a book. We chatted about how many folks had used the study guide to get their licenses and liked his approach. Then we talked about getting the word out so more people could use it. After flipping through it, I volunteered to put it on our club's website. In 2006, Bruce couldn't update his study guide, so he let me do it. That was the first issue of the No-Nonsense, Technician-Class Study Guide. In 2007, I produced the General Class version and in 2012, the Extra Class one. All three have been updated over time to reflect the latest question pools. Now they're available as PDFs, Kindle files, and ePub files. I planned to make iPhone and iPad versions too, but Apple's being stubborn about my iTunes developer account . Anyway, you can get the Kindle version and read it on your iPhone or iPad with the Kindle app. To be honest, I've helped thousands of people get their amateur radio licenses. If you're one of them, thanks for downloading or buying a study guide! Bruce gave me permission to post his study guide online in 2006 after he couldn't update it himself. This first version was the No-Nonsense, Technician-Class Study Guide. I then made the General Class Study Guide in 2007 and eventually the Extra Class License Study Guide in 2012 after some persuasion.

No nonsense technical solutions. Nonsense technical jargon. No nonsense tech study guide. No nonsense mechanic. Non certified technician jobs. No nonsense guides.
