Dimenhydrinate tablets

What is this medicine?

Dimenhydrinate is used to prevent and treat nausea, vomiting, dizziness, and vertigo associated with motion sickness.

Dimenhydrinate may also be used for purposes other than those listed in this medication guide.

What should I tell my health care provider before I take this medicine?

Before taking this medication, tell your doctor if you have

- kidney or liver disease,
- an enlarged prostate,
- difficulty urinating,
- bladder problems,
- glaucoma,
- asthma, or
- an irregular heartbeat or any other type of heart disease.

You may not be able to take dimenhydrinate, or you may require a lower dose or special monitoring during treatment if you have any of the conditions listed above.

Dimenhydrinate is in the FDA pregnancy category B. This means that it is unlikely to harm an unborn baby. Do not take dimenhydrinate without first talking to your doctor if you are pregnant.

Dimenhydrinate passes into breast milk and may harm a nursing baby. Do not take dimenhydrinate without first talking to your doctor if you are breast-feeding a baby.

Dimenhydrinate is not recommended for use by children younger than 2 years of age, except under the direction of a doctor.

How should I use this medicine?

Take dimenhydrinate exactly as directed by your doctor. If you do not understand these directions, ask your pharmacist, nurse, or doctor to
