## Prednisolone ophthalmic

### What is prednisolone ophthalmic?

Prednisolone ophthalmic (for the eyes) is a steroid medicine used to treat eye inflammation caused by allergies, severe acne, shingles (herpes zoster), eye injury, chemical burns, or certain other conditions.

Prednisolone ophthalmic may also be used for purposes not listed in this medication guide.

### Important Information

You should not use prednisolone if you have an eye infection (including herpes simplex).

### Before taking this medicine

You should not use prednisolone if you are allergic to it, or if you have an eye infection (including herpes simplex).

Tell your doctor if you have ever had:

- glaucoma; or
- cataracts.

It is not known whether this medicine will harm an unborn baby. Tell your doctor if you are pregnant.

You should not breast-feed while using prednisolone ophthalmic.

Prednisolone ophthalmic is not approved for use by anyone younger than 18 years old.

### How should I take prednisolone ophthalmic?

Follow all directions on your prescription label and read all medication guides or instruction sheets. Use the medicine exactly as directed. Shake the eye drops well just before each use.
