## Bimatoprost eye drops

### What is this medicine?

BIMATOPROST reduces pressure in the eye by increasing the amount of fluid that drains from the eye. Bimatoprost ophthalmic (for the eyes) is used to treat certain types of glaucoma and other causes of high pressure inside the eyes. Bimatoprost ophthalmic may also be used for purposes not listed in this medication guide.

### What should I tell my health care provider before I take this medicine?

You should not use this medication if you are allergic to bimatoprost.

Before using bimatoprost, tell your doctor if you are allergic to any drugs, or if you have swelling or infection of your eye.

Bimatoprost ophthalmic may cause a gradual change in the color of your eyes or eyelids and lashes, as well as increased growth or thickness of your eyelashes. These color changes, usually an increase in brown pigment, occur slowly and you may not notice them for months or years. Color changes may be permanent even after your treatment ends, and may occur only in the eye being treated. This could result in a cosmetic difference in eye or eyelash color from one eye to the other.

FDA pregnancy category C. It is not known whether bimatoprost ophthalmic will harm an unborn baby. Tell your doctor if you are pregnant or plan to become pregnant while using this medication.

It is not known whether bimatoprost ophthalmic passes into breast milk or if it could harm a nursing baby. Do not use this medication without telling your doctor if you are breast-feeding a baby.

### How should I use this medicine?

Do not use this medication while wearing contact lenses. Bimatoprost ophthalmic may contain a preservative that can discolor soft contact lenses. Wait at least 15 minutes after using bimatoprost before putting in your contact lenses.
