What is this medicine?

Scarend is the most effective topical Silicone Gel, used to help get rid of scars in recently healed wounds and also reduce current almost formed scars. After clinical trials, this gel has proven to smooth, flatten and reduce scars, it prevents itching, pain and discomfort associated with scars.

How Scarend Works?

The mode of action of silicone based gels in scar management has not been completely investigated.

Still there are some perceptible benefits from silicone composed agents during usage of them on scars :

- Dries up fast, is easy to use
- Has no color
- It may be used for children and patients with larger scars or someone who has experienced a skin graft operation or suffered from a burn
- Supports the moisture balance of the skin
- Serves as an elastic barrier on the damaged skin
- May be applied on both: the face and joints
- You can put some Make-up over Scarend Gel to cover the scar

How to use Scarend Silicone Gel

Scarend is simply applied to most areas of the body, either face or joints. It is released in a 10g tube and can be ordered with or without a prescription. It is recommended to use the Gel twice a day:

Step 1 Clean up the area that needs treatment with mild soap and water and dry it.

Step 2 Cut the tip of the tube. Apply a very thin coat of Scarend Gel to the scar as soon as possible and rub it in gently.

Step 3 Allow it to dry for 4 – 5 minutes. If the gel has not dried, remove the excess product.

Precautions
