Nilotinib capsules

What is nilotinib?

Nilotinib is a cancer medicine that interferes with the growth and spread of cancer cells in the body.

Nilotinib is used to treat a type of blood cancer called Philadelphia chromosome positive chronic myeloid leukemia (CML) in adults and children who are at least 1 year old.

Nilotinib is usually given after other medications have been tried without success.

Nilotinib may also be used for purposes not listed in this medication guide.

Important Information

You should not use nilotinib if you have long QT syndrome, or low blood levels of potassium or magnesium.

Nilotinib can cause a serious heart problem, especially if you use certain other medicines at the same time. Tell your doctor about all your other medicines. Your heart function may need to be checked before and during treatment with nilotinib.

Call your doctor right away or get emergency medical help if you have fast or pounding heartbeats and sudden dizziness (like you might pass out). Avoid eating anything for at least 2 hours before and 1 hour after you take nilotinib.

Before taking this medicine

You should not use nilotinib if you are allergic to it, or if you have:

- low blood levels of potassium or magnesium; or
- a heart rhythm disorder called long QT syndrome.

Tell your doctor if you have ever had:

heart disease, heartbeat problems, or long QT syndrome (in you or a family member);
a stroke;

• blood circulation problems in your legs;
