Halobetasol Propionate Cream

What is halobetasol topical?

Halobetasol is a highly potent steroid that helps reduce inflammation in the body.

Halobetasol topical (for the skin) is used to treat inflammation and itching caused by plaque psoriasis or skin conditions that respond to steroid medication.

Halobetasol topical may also be used for purposes not listed in this medication guide.

Important Information

Follow all directions on your medicine label and package. Tell each of your healthcare providers about all your medical conditions, allergies, and all medicines you use.

Before taking this medicine

You should not use halobetasol if you are allergic to it.

Tell your doctor if you have ever had:

- any type of skin infection;
- a skin reaction to any steroid medicine;
- liver disease; or
- an adrenal gland disorder.

Steroid medicines can increase the glucose (sugar) levels in your blood or urine. Tell your doctor if you have diabetes.

It is not known whether halobetasol topical will harm an unborn baby. Tell your doctor if you are pregnant.

It may not be safe to breastfeed while using this medicine. Ask your doctor about any risk. If you apply halobetasol to your chest, avoid areas that may come into contact with the baby's mouth.

Halobetasol topical is not approved for use by anyone younger than 12 years old. Some brands or forms of this medicine are for use only in
