Olopatadine eye drops

What is this medicine?

OLOPATADINE is an antihistamine that reduces the natural chemical histamine in the body. Histamine can produce symptoms of itching or watery eyes.

Olopatadine is used to treat ocular (eye) symptoms of allergic conditions, such as inflammation, itching, watering, and burning.

What should I tell my health care provider before I take this medicine?

You should not use Olopatadine if you are allergic to olopatadine. Before using Olopatadine, tell your doctor if you have any type of infection in your eye.

FDA pregnancy category C. This medication may be harmful to an unborn baby. Tell your doctor if you are pregnant or plan to become pregnant during treatment. It is not known whether Olopatadine passes into breast milk or if it could harm a nursing baby. Do not use Olopatadine without telling your doctor if you are breast-feeding a baby. Do not use this medication in a child younger than 3 years old without the advice of a doctor.

How should I take this medicine?

Use Olopatadine exactly as prescribed by your doctor. Do not use it in larger amounts or for longer than recommended. Follow the directions on your prescription label.

Wash your hands before using the eye drops.

To apply the eye drops:

Tilt your head back slightly and pull down your lower eyelid to create a small pocket. Hold the dropper above the eye with the dropper tip down. Look up and away from the dropper as you squeeze out a drop, then close your eye.

Gently press your finger to the inside corner of the eye (near your nose) for about 1 minute to keep the liquid from draining into your tear duct. If you use more than one drop in the same eye, wait about 5 minutes before putting in the next drop.
